

October 14, 2016

Dear Hiring Manager,

I am writing to offer you a keen, analytical, and creative set of new eyes. I am beyond excited about the opportunity to be your next Python Django Developer. I have a basic understanding of HTML, CSS, Javascript, and am comfortable working with website wireframes as a result of my work experience as a marketing technician. Additionally, I am currently taking a computational physics course in Python, in addition to my own excited exploration of the language.

The contributions I would bring to your team exist beyond the more obvious requirements. While extensive lab experience and art involvement has resulted in a keen attention to detail, problem solving and conquering task after task have become passions through physics. I have a dedicated work ethic, have become adaptable to new situations and work environments, and absorb new material quickly as a result of my experience in the art world. These experiences have also left me comfortable in fast paced environments, with an ability to effectively handle a multitude of tasks in an organised manner.

My work ethic and creative problem solving can speed up your development process, my fast learning skills will reduce the usual training time, and my python abilities can improve the scalability of your project to save project refactoring in the future. This is evident in my previous work at Infill Sales when I learned three new programs in a weekend and contributed significantly to a steady increase in both income and customer satisfaction.

I would like the opportunity to come in and talk to you about your project, and am available at your earliest convenience. You can reach me at kailas.cassidy@uwaterloo.ca.

Best regards,
Kailas Cassidy
